

ImPuls fashion

Customizing

ImPuls fashion uses central administration systems, which are identical in terms of structure and handling. They serve for searching, selecting, sorting and assembling in detailed informations. You can adjust the structure of the particular browserlist yourself according to your own requirements and - similar to Excel- move fields and thereby guarantee individual customizing. In addition to being able to specify additional details of special conditions, addresses, personal data and information, ImPuls fashion provides the possibility to enter pictures, sketches of your items and materials. Pictures can also be added for customers, contacts or representatives etc. and birthdays monitored (Customer-Relationship-Management-CRM). ImPuls fashion boasts a project management in which all informations, written correspondence, evaluations and lists can be assigned to a single procedure.

Statistics, analysis and calculations

There are statistics and analysis about customers, suppliers, representatives, items, orders, turnover, material and production. Take a look at the stock inventory: this window can show you the various stock level of an article by colour and size with pictures. In addition to this ImPuls fashion provides the possibility of looking at the individual colours of an item and how many will be available on a specific delivery date or how many open purchase orders respectively production orders are scheduled. So you can recognize immediately whether you can meet a customers requirement. With an OLAP tool you can also generate your own analysis in graph form.
